
Phet Molecular Shapes Answers

molecular geometry and polarity (phet) - figure 1. the phet computer simulation "molecule shapes". your initial task in this activity is to determine the molecule geometry as the number of electron pairs changes. accomplish this by using the computer simulation "molecule shapes" (shown at left) and fill in the table. notice, in this simulation you can increase **molecular shapes lab name step 1: go to [http://phet ...](http://phet...)** - molecular shapes lab name _____ purpose: you will use a 3d computer simulator to determine patterns in molecular geometry and electron geometry. by the end of this lab, you should be able to determine the shape of a basic molecule based on the bonds and electron pairs surrounding the central atom. **phet simulations: molecular shapes directions - weebly** - phet simulations: molecular shapes directions proceed with the following procedures in order to fill out the accompanying worksheet for this simulation. 1) on the class website, johwang.weebly, click on the link tab at the top 2) under chemistry links and unit 4 links, click on molecular shapes simulation. **making molecules - described and captioned media program** - two molecular shapes activities objective the following two activities—phet simulation: molecular shapes and building molecules—allow students to visualize the 3-d shapes of molecules. phet, a project at the university of colorado at boulder, uses education research to design online stem interactives. the programs are free to use. **phet faq's and tips for teachers molecule shapes ...** - phet faq's and tips for teachers molecule shapes in the upper left corner of the sim, there is an option labeled 'teacher'. when you select this, a menu will drop down, allowing you to select (or unselect) "white background" inverts all of the colors in the simulation, which may make the **lab 11 molecular geometry objectives - bbips** - groups. the vsepr model can be used to predict the geometry of molecules and polyatomic ions. molecular geometry describes the positions of the nuclei in relation to each other included in the description are the bond angles, the angles made by the lines joining the nuclei of bonded atoms. **chemistry name period - mr. meagher's science - part 2 - real molecules** click on the "real molecules" tab at the top of the pageing the pull down menu, select the molecules below and fill in the chart. match the molecule to the generic structure above. **phet molecule polarity activity - royal society of chemistry** - • explain the relationship between bond dipoles and molecular dipole. • accurately predict and explain the bond dipoles and molecular dipoles of real molecules. part i: explore (5 minutes) 1. explore the phet molecule polarity simulation with your partner or group. part ii: two atoms tab (5-8 minutes) 2. **lab report for vsepr theory and shapes of molecules** - lab report for vsepr theory and shapes of molecules hcn 1. lewis structure 2. perspective drawing 3. number of atoms bonded to central atom 4. number of non-bonding electron pairs on the central atom 5. electronic geometry: 6. molecular geometry with ideal bond angles 7. hybridization of central atom 8. polarity: ch 3oh 1. lewis structure 2 ...
